THE COMPLETE

AI AGENT + TIKTOK BUSINESS PLAN

How Robbie Gave an AI Agent $100, Posted on TikTok, and Built $100K/Year in Recurring Revenue in 13 Days

Produced by The Koerner Office
Based on Original Interview with Robbie (heyron.ai)
2026 Edition

Table of Contents

1. Executive Summary

14. Startup Checklist & 30-Day Launch Plan
15. Final Thoughts

Executive Summary

This business plan documents the most unusual startup story of 2026: a non-technical operations guy named Robbie downloaded a free AI tool called OpenClaw, gave his AI agent (named Ron) a $100 budget and 90 days to build a profitable business, and then posted the entire experiment on TikTok. The first video got over a million views. Within 13 days, he had $8,374 in monthly recurring revenue, 270 paying subscribers, and an annualized run rate of $100,000+. He spent zero dollars on advertising. He wrote zero lines of code. The AI agent did the market research, proposed the business model, designed the product, and built the infrastructure. Robbie's job was to click buttons, post TikTok videos, and say yes.

The remarkable thing about this story is that it's replicable. Not the exact business (selling AI agent access), but the framework: give an AI agent a task, document the journey publicly on social media, listen to what your audience tells you they want, let the agent build it, pre-sell it, and launch. The two inputs are an AI agent and a willingness to post content. That's it. This business plan covers every step of the framework in tactical detail so anyone can copy the process. You don't need to sell AI agents. You could sell research services, content creation, lead generation, app development, consulting, or a hundred other things. The framework is the same: AI does the work, you post the journey, the audience tells you what to build, and you sell it.

Key Metrics (Robbie's Actual Results)

Total investment: $200 (Claude Max subscription). Day 1 TikTok video: 1,000,000+ views. Subscribers from that video: 15,000. Pre-orders at $10 each: 617 ($6,170). Conversion to $29/month subscribers: 270 (45% conversion). Monthly recurring revenue (Day 13): $8,374. Annualized recurring revenue: $100,000+. Monthly costs: ~$2,500 (servers + tokens). Monthly net profit: ~$6,000. Paid advertising: $0. Coding required: Zero. Time to profitability: Immediate (pre-orders funded the build).

The Opportunity: Why This Works Right Now

The Perfect Storm: AI + Short-Form Video + Early Market

Three forces are converging right now that make this the single best time in history to start a business using this framework:

- Agentic AI is 100 days old. Robbie says it plainly: "Imagine logging into the internet 100 days into the internet." The tools that let AI agents control computers, browse the web, create files, and do real work are brand new. The people experimenting with these tools right now will have a massive head start when the technology goes mainstream in 12–24 months.
- Short-form video rewards curiosity over polish. TikTok's algorithm doesn't care about your follower count, your production quality, or your credentials. It cares about one thing: does the viewer stop scrolling? A non-technical guy filming his computer screen while an AI builds a business is inherently scroll-stopping content. Robbie's first video got a million views with zero editing, zero followers, and zero ad spend.
- Most people are aware of AI but aren't using it. Every business owner has heard of ChatGPT. Almost none of them have deployed an AI agent. Every consumer has seen AI in the news. Almost none of them have their own agent. This creates a massive gap between awareness and adoption. You fill that gap by showing people what's possible, which generates both an audience and customers simultaneously.

The Build-in-Public Advantage

Robbie didn't build a business and then market it. He marketed the process of building it. Every step, every failure, every pivot, every win became a piece of content. This is the "build in public" model and it's the most powerful marketing strategy available in 2026 for three reasons:

- Content is created as a byproduct of work, not as a separate task. You're not spending 2 hours creating a TikTok and then 6 hours working on your business. The TikTok IS the business. Every conversation with your agent, every experiment, every result is a 30-second video.
- The audience self-selects for buyers. People watching a series about an AI agent building a business are exactly the people who would pay for their own AI agent. The content attracts the customer. There's no mismatch between audience and market.
- Failures are content too. Robbie's Fiverr experiment failed. He posted about it. The TikTok comment analysis that led to the real business only happened because Robbie had been posting about the failures. If his first attempt had succeeded, the $100K business would never have been built.

If you want to learn how to build an audience and go viral with content like this, check out Plans of Grandeur, a community of 1,000+ people working on exactly that. Dozens of hours of training on growing from zero to millions of followers.

Case Study: Robbie’s Exact Timeline (Day by Day)

Robbie & Ron: The 13-Day Timeline

Day	Action	Content Posted	Result
Day 1	Gave Ron $100 budget + 90-day deadline	TikTok: "I gave my AI $100 to start a business"	1M+ views, 15K subscribers
Day 2	Ron proposes SWOT analysis service on Fiverr	TikTok: updates on what Ron is doing	Building anticipation
Day 3–5	Ron writes Fiverr copy, Robbie creates listing	TikTok: showing Ron at work	Few Fiverr views, no sales
Day 5	Robbie hooks Ron to TikTok to analyze his content	TikTok: "Ron is analyzing my TikTok"	200+ comments: "I want a Ron"
Day 6	Ron scrapes 200 comments with Apify	None (working)	Ron identifies the real opportunity
Day 7	Ron proposes: "Copy and paste me. Sell access."	None (building)	Business model created by the AI
Day 8–9	Ron researches Contabo servers, Docker containers	TikTok: "Ron is building his own business"	More views, more demand
Day 10	Ron designs the product: containerized AI agents	TikTok: Ron’s launch video (raccoon voice)	617 pre-orders at $10 each
Day 11–12	Robbie and Ron build infrastructure, onboard users	Going heads-down, minimal posting	270 convert to $29/month
Day 13	$8,374 MRR achieved	Resumes posting	$100K+ annualized revenue

Revenue Trajectory

Day 1: TikTok video goes viral	**$0**
Day 10: 617 pre-orders at $10	**$6,170**
Day 13: 270 monthly subs at $29	**$8,374 MRR**

Month 2 projected (400 subs)	**$11,600 MRR**	
Month 6 projected (800 subs)	**$23,200 MRR**	
Month 12 projected (1,500 subs)	**$43,500 MRR**	

What Made This Work

Three things happened in sequence that created the $100K business: (1) Robbie posted about doing something interesting (giving an AI $100). That got attention. (2) He listened to what the audience told him they wanted ("I want my own Ron"). (3) He let the AI build exactly what the audience asked for. He didn’t guess. He didn’t assume. He let the market and the AI do the work. His contribution was posting content and clicking buttons.

Step 1: Set Up Your AI Agent

Before you can document the journey, you need an AI agent. There are three options depending on your budget and technical comfort. Pick the one that matches your situation and move on to Step 2 the same day.

3 Ways to Get Your Agent

Option	Cost	Setup Time	Technical Skill	Best For
A: Claude Max + OpenClaw (Robbie's setup)	$200/month	1–2 hours	Low-Medium	People who want the full experience
B: Robbie's community (heyron.ai)	$29/month	5 minutes	Zero	Non-technical, fastest start
C: Cloud server + Docker + Claude API	$20–$60/month	2–4 hours	Medium	Budget-conscious tinkerers

Option A: Claude Max + OpenClaw (Recommended for This Business)

This is exactly what Robbie did. Claude Max is Anthropic's $200/month subscription that gives you unlimited access to Claude (the AI brain). OpenClaw is the free, open-source tool that connects Claude to your computer so it can browse the web, create files, and control applications. You install OpenClaw, connect it to your Claude Max account, and now you have a fully agentic AI that can do real work on your computer.

Why $200/month is worth it for this specific business: Your content is about giving an AI money and watching it build a business. The $200/month Claude Max subscription IS the investment. It's the $100 that Robbie gave Ron. It's the premise of the entire series. The subscription pays for itself the moment your first piece of content goes viral and you convert viewers into customers.

Quick Setup Steps (Option A)

1. Go to claude.ai and subscribe to Claude Max ($200/month). This gives you unlimited Claude access.
2. Go to the OpenClaw GitHub page and follow the installation instructions for your operating system (Mac, Windows, or Linux). It's a downloadable application.

3. Connect OpenClaw to your Claude Max account using the API key or direct connection method specified in the docs.
4. Give your agent a name. Robbie chose Ron. Pick something memorable. This character becomes part of your brand.
5. Have your first conversation: "Here's who I am. Here's what I want to do. I'm giving you a budget of $[X]. You have 90 days to build a profitable business. What do you want to start with?"
6. Screen-record this entire conversation. This is your first piece of content.

Step 2: Let the Agent Propose a Business

This is the part that makes the content compelling. You don't tell the agent what business to build. You ask it. Robbie's exact approach: "What do you think you would be good at?" Ron came up with SWOT analysis services on Fiverr. That happened to fail. But it doesn't matter, because the failure was content and the pivot led to the real business.

The Conversation Framework

1. Start broad: "Based on my skills and situation, what kind of business could you help me build with a budget of $200?"
2. Let it research: "Go research the top 10 most viable business ideas for someone in my situation. Consider my skills, my time availability, and what you're capable of doing as an AI agent. Come back to me with a ranked list."
3. Pick the top 2–3 ideas and ask: "For each of these, what would Day 1 look like? What's the fastest path to first revenue?"
4. Choose one and say: "Let's go with [idea]. Create a Day 1 action plan. What do we need to set up? What are the first 5 things you're going to do?"
5. Document the entire conversation. Screenshot it. Screen-record it. This is content gold.

What Might Your Agent Propose?

Based on what AI agents are good at today, here are the most likely business ideas your agent will suggest:

Most Likely Agent-Proposed Businesses

Business	Why the Agent Suggests It	Revenue Model	Robbie's Relevance
Research/analysis service (Fiverr/Upwork)	Agent can do deep research instantly	$50–$500/project	Ron's first attempt
Content creation service	Agent writes posts, emails, blogs	$500–$2K/client/mo	Content is agent's strength
Lead generation service	Agent scrapes and qualifies leads	$200–$1K/list	Agent + web browsing
AI agent access (Robbie's model)	Agent suggests duplicating itself	$29+/user/month	Exactly what happened

Niche SaaS or tool	Agent builds simple software	$10–$100/user/month	Golf tracker example
Consulting/audit service	Agent does the analysis, you present	$500–$5K/project	SWOT analysis evolved
Course or info product	Agent creates curriculum from your expertise	$47–$997/sale	Agent can build courses

Step 3: Document Everything on TikTok

This is the engine of the entire business. Everything you do with your AI agent becomes a piece of content. The content attracts an audience. The audience tells you what they want. You build it. The content is not separate from the business. The content IS the business.

The 5 Types of Videos That Work

Content Playbook for AI Agent Series

Video Type	Example	Why It Works	Frequency
The Setup	"I gave my AI $100 and 90 days to build a business"	Massive curiosity hook, people HAVE to follow	1x (your first video)
The Update	"Day 3: My AI just proposed starting a Fiverr business"	Serial storytelling, people follow for the saga	Daily for first 2 weeks
The Fail	"My AI's Fiverr experiment flopped. Here's why."	Vulnerability + education, builds trust	Whenever something fails
The Breakthrough	"My AI just scraped 200 comments and found a business"	Dopamine hit, shareable, proves the concept	When wins happen
The Behind-the-Scenes	"Watch my AI build a website in real time"	Satisfying to watch, educational, visual	2–3x per week

The Formula for Each Video

1. Hook (first 2 seconds): Start with the most interesting thing. "My AI just made $6,000 while I was sleeping." "617 people just paid my AI $10 each." "My AI deleted its own business plan and started over."
2. Context (5–10 seconds): Briefly remind viewers what's happening. "If you're new here, I gave my AI a $100 budget and 90 days to build a business. Here's what happened today."
3. The meat (15–20 seconds): Show what happened. Screen recordings of the agent working, conversations with the agent, results, numbers, reactions.
4. Cliffhanger or CTA (last 3–5 seconds): "Follow to see if it actually works" or "Part 7 drops tomorrow" or "Link in bio if you want your own."

Platform Strategy

Robbie posted almost exclusively on TikTok. That's where his audience found him. But you should cross-post to Instagram Reels, YouTube Shorts, and X (Twitter) simultaneously. The same 30–60 second video works on all four platforms. TikTok's algorithm is the most likely to give you a viral breakout, but the others compound your reach.

For a deep dive on how to actually go viral, craft hooks, build an audience from zero, and optimize short-form content across platforms, check out Plans of Grandeur. It's a community of 1,000+ people working on growing their brands with dozens of hours of tactical training on exactly this.

Step 4: Listen to the Comments (Market Research)

This is the step most people skip. It's also the step that made Robbie $100,000. His Fiverr experiment flopped. But his TikTok about the Fiverr experiment generated 200+ comments saying the same thing: "How do I get my own Ron?" That's not just engagement. That's market research. That's 200 people raising their hands and saying "I will pay for this."

How to Mine Comments for Business Ideas

1. After every video, read the comments. All of them. Look for patterns. What questions keep coming up? What are people asking for?
2. Use your AI agent to scrape and analyze comments at scale. Robbie used Apify (a web scraping tool) to pull all 200+ comments. Ron then categorized them and identified the dominant theme: "200 people want their own AI agent."
3. When 10+ people ask for the same thing, that's a signal. When 50+ people ask, that's a mandate. When 200+ people ask, that's a business.
4. The agent should propose the product based on the comment data. Robbie didn't decide to sell AI agent access. Ron analyzed the comments, identified the demand, and proposed the product. Let your agent do the same.

> **The Comment-to-Product Pipeline**
>
> Content → Comments → Agent Scrapes Comments → Agent Identifies Demand → Agent Proposes Product → You Validate by Posting About It → More Comments Confirm Demand → Pre-Sell → Build → Launch. This is not a funnel. It's a feedback loop. Every piece of content generates data. The data informs the product. The product becomes content. The content generates more data. It compounds.

Step 5: Let the Agent Build the Product

Once you know what the market wants, your agent can build it. Ron researched cloud hosting providers, found Contabo, designed the containerized agent architecture, and laid out the full technical plan. Robbie's job was to create accounts and click buttons. Here's how this works regardless of what you're building:

What Your Agent Can Build

- A Fiverr or Upwork service listing with optimized copy, pricing, and portfolio.
- A Shopify store or landing page for a digital product.
- A subscription community (using Skool, Discord, Circle, or similar).
- An email sequence to nurture leads into customers.
- A course outline with module descriptions, lesson plans, and marketing copy.
- A simple software tool or app (via vibe coding, where the agent writes the code and you test it).
- A full business plan with financial projections, competitive analysis, and go-to-market strategy.
- The infrastructure for a SaaS or subscription product (server setup, user management, billing integration).

Your Role During the Build Phase

You are the "human in the loop." The agent does the thinking and building. You do three things: (1) create accounts and enter credentials the agent can't access (bank accounts, platform signups that require ID verification), (2) make judgment calls when the agent presents options ("Should we price this at $19 or $29?"), and (3) document the process for content. That's it. You are the agent's hands and its public face. The agent is the brain and the builder.

Step 6: Pre-Sell Before You Build

Robbie had 617 people put down $10 before he built anything. $6,170 in pre-order revenue before a single server was configured. This is the most important step in the entire process because it eliminates risk. If nobody pre-orders, you don't build. You pivot. If 617 people pre-order, you know you have a business. You build with confidence.

The Pre-Sell Playbook

1. Create a pre-order page using Gumroad, Stripe Payment Links, Stan Store, or similar. Keep it simple: product name, description (3–5 sentences), price ($10–$50 deposit), and a payment button.
2. Post a TikTok announcing the product. Robbie had Ron create the announcement video (the raccoon voice video). Show what the product will be, what it costs, and why the deposit locks in early pricing.
3. Link the pre-order page in your TikTok bio. Mention it in every video: "Link in bio if you want your own."
4. Set a deadline: "Pre-orders close Monday." Scarcity drives action. Robbie used founding member pricing ($29/month locked forever) with a closing window.
5. Track results in real time. If you get 50+ deposits in 48 hours, you have something. If you get 5, you might need to pivot or create more content to build demand.

> **Why $10 Deposits Are Genius**
>
> $10 is low enough that impulse buyers will commit, but high enough to filter out pure tire-kickers. If someone puts down $10, they're probably 50%+ likely to convert to a full subscription. Robbie's conversion was 45% (270 of 617 pre-orders converted to $29/month). That's a remarkably high conversion rate and it's because the $10 deposit selected for people who were genuinely interested, not just vaguely curious.

Step 7: Launch & Fulfill

After pre-orders validate demand, you build and deliver. Robbie went heads-down for 10 days after launch to make sure the product worked before posting more content. This is critical: under-promise, over-deliver. Your first customers are your evangelists or your critics. Make them evangelists.

Launch Checklist

1. Build the product to minimum viable quality. It doesn't need to be perfect. It needs to work.
2. Onboard pre-order customers first. Send personal emails or DMs. Walk them through setup. Collect feedback aggressively.
3. Fix the top 3 issues before opening to the general public.
4. Document the launch process as content. "Day 1 of onboarding 270 customers" is great content.
5. Set up recurring billing through Stripe or your payment platform. Monthly auto-charge is essential. Do not chase manual payments.
6. Create a community space (Discord, Skool, Circle) for customers to interact, share wins, and support each other. This is retention infrastructure. Customers who are in a community churn 50–70% less than solo customers.
7. Resume posting content. The launch is the start, not the end. Every customer win, every product improvement, every milestone is a new video.

The Content Engine: How to Go Viral Doing This

Why AI + TikTok Is The Perfect Combo

AI content is the fastest-growing category on every social media platform in 2026. People are fascinated, curious, and slightly terrified of AI. Content that shows AI doing real things (not theoretical discussions, but actual screen recordings of an AI building a business) is inherently viral because it triggers curiosity, fear of missing out, and the "I need to learn this" instinct simultaneously.

Robbie's first video hit a million views because it combined two of the most powerful content hooks: a challenge ("Can this AI make $20,000?") and a series format ("Follow along to find out"). The challenge creates curiosity. The series format creates retention. People subscribe not because they liked one video, but because they need to know what happens next.

Content Frequency & Consistency

During the first 2 weeks of your experiment, post daily. Every day is a new chapter in the story. After the initial burst, posting 3–5 times per week is sufficient to maintain momentum. The key insight from Robbie: "I went into TikTok basically doing it for me. I was going to do cool stuff and document it and if it only gets 200 views, great." He wasn't optimizing for virality. He was optimizing for authenticity. The virality was a byproduct.

The Interest Media Shift

Robbie made an important observation: "We've moved from social media to interest media." TikTok's algorithm serves content to people based on their interests, not who they follow. A brand new account with zero followers can hit a million views on its first video if the content matches an interest that millions of people share. AI is that interest right now. You don't need an audience to start. The algorithm will find your audience for you.

But even 200 views can be profitable. Robbie pointed out that 200 targeted views (people who are interested in AI agents specifically) can be more profitable than 2 million untargeted views. If 200 people watch your video about building an AI agent business and 5 of them pay you $29/month, that's $145/month from a single video with 200 views. You do not need to go viral to make money. You need to be specific.

To learn exactly how to craft hooks, build series, optimize posting frequency, and grow from zero to millions of followers using short-form video, join Plans of Grandeur. It's a community built specifically for this, with the exact playbook Chris used to grow to 5 million followers in 2 years.

Pricing, Packaging & Revenue Models

Robbie's Pricing Structure

Robbie's Exact Pricing

Tier	Price	What's Included	Notes
Pre-order deposit	$10 (one-time)	Reserves a spot, applied to first month	Filters tire kickers
Founding member	$29/month (locked forever)	AI agent + community + templates	Early adopter pricing
Future standard pricing	$49–$79/month (projected)	Same + expanded features	After founding period closes
Potential premium tier	$99–$199/month	Business-focused agent, more tokens, 1:1 support	Future upsell

Revenue Models You Can Copy

You don't have to sell AI agent access specifically. Here are 7 revenue models that work with this framework:

7 Revenue Models for AI + Content Businesses

Model	Price Range	Examples	Monthly Revenue at 100 Customers
SaaS/subscription (Robbie's model)	$29–$99/month	AI agent access, tools, platforms	$2,900–$9,900
Community/membership	$29–$199/month	Discord + education + networking	$2,900–$19,900
Done-for-you service	$500–$5,000/month	AI implementation for businesses	$50K–$500K (fewer clients)
Course/info product	$47–$997 (one-time)	"Build Your Own AI Agent" course	$4,700–$99,700 (per launch)
Freelance services (via agent)	$50–$500/project	Research, content, lead gen on Fiverr	$5,000–$50,000
Affiliate revenue	Varies	Recommend tools (Claude, hosting, etc.)	$500–$5,000+

Sponsorships	$500–$10,000/video	AI tools, SaaS companies sponsor your content	$2,000–$40,000

Unit Economics & Financial Projections

Robbie's Actual Unit Economics

Monthly P&L (At 270 Subscribers)

Line Item	Amount	Notes
Revenue (270 x $29)	$7,830	Before growth
Other revenue (new signups, overages)	$544	Bringing total to $8,374 MRR
Server costs (4 Contabo servers)	- $600	Hosting infrastructure
AI token costs (Claude API)	- $2,000	Fluctuates with usage
Payment processing (Stripe 2.9%)	- $243	Standard Stripe fees
TOTAL COSTS	- $2,843	
NET PROFIT	$5,531	66% net margin

12-Month Projection: Copying Robbie's Model

Conservative estimate. You won't have Robbie's million-view first video (probably). But you can build steadily with consistent posting. Assumes $29/month subscription model with 5–8% monthly churn.

12-Month Projection (Subscription Model)

Month	New Subs	Churned	Active Subs	Revenue	Costs	Net Profit
1	30	0	30	$870	$400	$470
2	40	2	68	$1,972	$500	$1,472
3	50	4	114	$3,306	$700	$2,606
4	40	6	148	$4,292	$900	$3,392
5	50	8	190	$5,510	$1,100	$4,410
6	60	10	240	$6,960	$1,400	$5,560
7	50	12	278	$8,062	$1,600	$6,462

8	60	14	324	$9,396	$1,900	$7,496
9	50	16	358	$10,382	$2,100	$8,282
10	60	18	400	$11,600	$2,400	$9,200
11	50	20	430	$12,470	$2,600	$9,870
12	60	22	468	$13,572	$2,800	$10,772
YEAR	600 total	132 churned	468 active	$88,392	$18,400	$69,992

The Compounding Effect

In Month 1, you make $470 profit. In Month 12, you make $10,772 profit. Same effort. Same posting schedule. The difference is that subscriptions compound. Every new subscriber adds to the base. Even with 5–8% monthly churn, the base grows steadily. By Month 12, you're making six figures annualized from a business that started with a $200 subscription and some TikTok videos.

Startup Checklist & 30-Day Launch Plan

What You Need Before Day 1

Startup Checklist

Item	Cost	Priority
Claude Max subscription (or API key)	$200/month (or $20–$50/mo for API)	Must have
OpenClaw installed on your computer	$0 (open source)	Must have
TikTok account	$0	Must have
Instagram account (for Reels cross-posting)	$0	Recommended
Stan Store or Gumroad (for pre-orders)	$0–29/month	Must have
Stripe account (for payments)	$0 (percentage per transaction)	Must have
Screen recording software (OBS, Loom, or built-in)	$0	Must have
Basic phone or webcam for face-cam content	$0 (your phone)	Must have
Discord server (for community)	$0	Before launch
TOTAL STARTUP COST	$200/month	Just the Claude subscription

Days 1–7: The Setup

1. Subscribe to Claude Max ($200/month). Install OpenClaw. Name your agent.
2. Have your first conversation: give the agent a budget ($100–$200) and a 90-day deadline to build a profitable business. Screen record the entire conversation.
3. Edit the screen recording into a 30–60 second TikTok. Hook: "I just gave my AI [budget] and told it to build a business. Here's what it said." Post it.
4. Let the agent propose a business idea. Document its research process. Post a Day 2 update video.
5. Begin executing whatever the agent proposes. Whether it's a Fiverr listing, a service business, a product, or something else, start building. Post daily updates.
6. Cross-post every TikTok to Instagram Reels, YouTube Shorts, and X.

If your first videos aren't getting traction, the issue is almost always the hook or the format. Plans of Grandeur has specific training on writing hooks that stop the scroll and formatting videos that the algorithm pushes. Worth joining before you start posting so you can get it right from Day 1.

Days 8–14: Read the Market

1. Read every comment on every video. Look for patterns. What are people asking for? What do they want you to build?
2. Have your agent scrape and analyze comments using Apify or a similar tool. Let the agent identify the dominant demand signal.
3. If the original business idea is working, keep going and post results. If it's not, pivot based on what the comments are telling you. The pivot IS the content.
4. Post about what the agent found in the comments. "My AI just analyzed 300 comments and found a business hiding in them." This is a viral video format.

Days 15–21: Pre-Sell

1. Based on the demand signal from comments, have your agent design a product or service.
2. Create a pre-order page (Stan Store, Gumroad, or Stripe Payment Link). $10–29 deposit.
3. Post a launch/announcement video. Have your agent write the script (Robbie had Ron write his own launch video). Link the pre-order in your bio.
4. Track pre-orders daily. If you hit 50+ in the first 48 hours, you have a viable business. Start building.

Days 22–30: Build & Launch

1. Build the product with your agent's help. Go heads-down for 5–10 days to make sure it works.
2. Onboard your first pre-order customers. Collect feedback. Fix the top issues.
3. Set up monthly billing via Stripe. Convert pre-order deposits into active subscriptions.
4. Create a Discord or Skool community for your customers. This is your retention engine.
5. Resume posting content. The launch, the onboarding, the first customer wins are all content.
6. Set your 90-day goal: 200–500 active subscribers at $29/month = $5,800–$14,500 MRR.

Final Thoughts

Robbie's story is proof that the old playbook is dead. You don't need a business plan, market research, funding, a technical co-founder, or years of experience to build a six-figure business in 2026. You need an AI agent and a TikTok account. That's not an oversimplification. That's literally what happened.

The formula is five steps. Step 1: Get an AI agent. Step 2: Give it a challenge. Step 3: Post the journey on TikTok. Step 4: Listen to the comments. Step 5: Build what the audience tells you they want. That's the entire business. The AI does the research, the building, and the heavy lifting. You do the posting, the decision-making, and the human-in-the-loop work. The audience does the market research for you by literally telling you what they'll pay for.

The thing I wrote in all caps in my notes during our interview was: POST YOUR CRAP. Robbie didn't have a content strategy. He didn't have a marketing plan. He didn't have a brand kit or a posting schedule or a social media manager. He did something interesting (gave an AI money) and told people about it. That's it. The internet rewarded his curiosity with a million views. The million views rewarded him with 15,000 followers. The followers told him what to build. The product he built generates $100,000 a year. And it all started with posting about something he was genuinely curious about.

You don't need permission. You don't need to be technical. You don't need to be an expert. You need to start an experiment, document it publicly, and let the market and the AI do the work. The tools are free. The distribution is free. The audience is waiting. The only thing standing between you and your version of Robbie's story is whether you post the first video.

> **Start Tonight**
>
> Download OpenClaw. Subscribe to Claude Max (or use the free tier to start). Name your agent. Give it $100 and 90 days. Screen-record the first conversation. Edit it into a 30-second TikTok. Post it. Then do the same thing tomorrow, and the next day, and the next. Within 2 weeks, you'll know if you have something. Within 30 days, you'll either have pre-orders or you'll have pivoted to something better based on what the audience told you. Either way, you'll be further ahead than 99.9% of the population. Because you started.

If you want the complete playbook on going viral, building an audience, and turning followers into customers, join Plans of Grandeur. It's the community where 1,000+ people are learning exactly how to do what Robbie did on the content side. Link: skool.com/plansofgrandeur
